EZ Integration - Overview

Last update 07-23-2025

EZ Integration accounts can ePrescribe controlled and non-controlled substances from within your EHR using WENO Online's DEA 1311.120 compliant application.

If you use OpenEMR

OpenEMR version 7.0.2 and above is already connected to WENO's EZ Integration—setup instructions and a step-by-step video are available directly on the WENO Online dashboard upon registering for an EZ Integration account at this url: online.wenoexchange.com.

For Everybody Else….

The steps below are only the "OVERVIEW" to give you an idea of the requirements. The full guide is accessible on the developers page once you get around to Step 1 below.

Step 1: Sign Up

Register at online.wenoexchange.com for the EHR EZ Integration account. Your account will remain in Test Mode until you are ready to go live and the GET OFF TEST MODE FEE. Sign in and go to the Developers Page and access the step-by-step guide for EHRs (not the steps for OpenEMR).

Step 2: Add Test Prescribers and Locations

Add locations, test prescribers and administrators on Weno Online. The most important part to remember is what you register must be the same as what you send for prescribers and locations or you will get an error. If after the prescriber undergoes the id proofing process, the name that is verified will be updated on WENO's side and your admin users will get notified to update it on your end.

Step 3: Whitelist Your IPs or Domain(s)

We require you to whitelisted IPs and/or domains for API request. This steps explains how to manage these.

Step 4: Encryption Key & Base64 Encoding

Your account is assigned an Encryption Key. This step shows you how to use it and how to encode for BASE64 when it is required. Sample code provided.

Step 5: Access LITE Pharmacy Directory Data

WENO's pharmacy directory is available for you to use for your user interface to enter a patient's primary and alternative pharmacy choices as well as to populate the ePrescribing messages going to pharmacies. This step provides sample code to access the Pharmacy Directory. You are required to updated daily and do a full file replace weekly.

Step 6: Additional User Interface Items

We recommend setting up a dedicated **WENO Integration Page** within your software. This will allow your team to easily manage key integration elements and streamline your users' prescribing experience. The Integration Page should include: encryption key management, user access credentials and support & onboarding materials.

Step 7: ComposeRx iFrame

This JSON object you send to WENO will return a URL for the ComposeRx screen, displayed in an iFrame. This also allows users without ePrescribing roles to compose and save prescriptions for prescribers to sign and complete, while also enabling prescribers to compose, sign, and transmit eRxs directly. In both cases, the ComposeRx screen auto-populates patient data, eliminating the need for manual entry during prescription creation.

Step 8: RxLog iFrame

The RxLog shows a complete record of a prescriber's prescriptions and is WENO's main way to notify them when action is needed—like responding to pharmacy requests, signing pending prescriptions, or fixing transmission issues. Prescribers or their staff can use the RxLog page to track and manage these items.

Provide a way (e.g., button, click or link from within your UI) for all registered users to access the RxLog IFRAME. Then create a JSON object that contains the WENO Online user's account credentials and pass it to the RxLog URL.

Step 9: NewRx Sync Report

Create a JSON object that contains one of your WENO Online **admin account** credentials and pass it to the Rx Sync Report URL. The Sync Report will be downloaded as a comma separated CSV or JSON file. It is necessary so you can update patient's charts with whatever prescribing activity occurred on WENO's screens.

Step 10: Manage API (Optional)

Use the Manage API to create, edit and delete users and locations. Other operations available as well.

Step 12: Complete Your Test Plan

Your test plan must be completed and sent to WENO for review. The Test Plan can be found on the EZ Integration page of your Weno Online dashboard.

Step 15: Go Live

The certification manage will review your test plan and demo your system. If all looks good, pay the GET off Test Mode sign on FEE and your account will be moved to live. Then you must add your REAL users/prescribers and Locations that match what you have on your side.
